OEM Replacement Tier 4 "Zero Leak" Flex Connectors

With the onset of new emission regulations and new exhaust system designs, OEM truck and engine manufacturers went from traditional flex to a new "zero leak" design. The Dynaflex Products OEM replacement connectors meet exhaust leak rate requirements, and are designed for use both before and after DPF and SCR systems.

- "Zero leak" stainless steel flex
- Long life; improved fatigue rates over standard interlock
- For use before and after DPF/SCR systems

New Paccar Numbers: Cross Reference

Although OEM manufacturers have changed their design to an expensive braided bellows, these "zero leak" flex connectors will fit, work, and cost substantially less than the new OEM designs. If the truck in question is no longer covered under a factory warranty, these parts will save you money!
