PETERBILT PICKETT DR

FULL DIAMETER CHROME KIT

NO DETAIL OVERLOOKED, FROM TURBO TO TAILPIPE

Taper-Loc Modular Connection

The Original 6", 7" and 8" Monster Stack systems were one piece. They were really hard to ship and the signature Dynaflex Taper-Loc connection was engineered to solve the problem. Taper-Loc allows for the modular flexibility of a 3 piece exhaust system, and when combined with correctly mounted 50 series clamps, gives a seamless look. The design relies on specific OD-ID pipe dimensions to create the most secure metal to metal connection in the industry. It's an often imitated but never replicated feature of our z-series chrome parts.

Turbo 2 Tailpipe

Although the DR kit doesn't come standard with all chrome everything, if you're as serious as this kit, our additional chrome plated exhaust options might interest you. Whether chrome turbo pipes, elbows, clamps or polished out flex; Dynaflex can get you show or road ready.

Chrome Plated Stainless Steel

Our 14 series brackets and 50 series clamps are manufactured using high quality 304 stainless steel to provide the proper support. After being polished, they are chrome plated using the highest quality chrome on the market. Some companies supply non-chrome plated clamps and after a few duty cycles they turn yellow. When you expect your investment to not only fit the best, but look the best, look for the DP.

Dynaflex Bushings

Designed based on the support requirements of a Dynaflex Original Monster Stack kit, the Dynaflex B4656 bushings durometer is harder than its OEM counterpart. Every Z-Series kit using 50BJ-PB clamp and 359/379 cab bracket includes our high quality bushing pack.

Behind the Box Diameter

There's not a whole lot to say. The DR is a Pickett style elbow, but instead of reducing down to 5" before the y-pipe, it remains the same diameter throughout. The Taper-Loc'd 33DR y-pipe doesn't go 5" until behind the boxes giving your exhaust that serious "show" look. Not every Pete with pipes is going to have the DR system and when you see a W900 with it, beware. This kit is the DP TEAM standard.

33DR Y Pipe

The 33DR is the most serious Y pipe in the game. Built with two 7" or 8" Taper-Loc'd ends and a 5" reduction, the 33DR is the key ingredient of the whole DR kit. Engineered for a perfect fit right between the frame rails, the elbow / y-pipe connections disappear behind 50 series clamps (48CH). Chrome plated like every other Dynaflex Monster Stack, this Y pipe will look just as good as the rest of your exhaust. If every detail must be perfect, the KDR is the kit for you.

Support Hangers

The 48CH hanger is a tech addition to the ever growing Dynaflex chrome exhaust line. Utilizing a 50 series clamp at the end of the polished stainless hanger, the 48CH does two jobs. First, it hides those two Taper-Loc'd connections; while secondarily supporting the additional weight of that full diameter, awesome new 33DR y-pipe.
