Hand Crafted Exhaust

As the makers of the Original Monster Stacks, we take extra care with the raw materials we use for your exhaust. Every tube is inspected by hand to some pretty insane standards. Whatever makes it through will flow through our California production facility, where we've been making parts for 40 years. Every process adds more hand laid love, until we finally dip it in the best chrome exhaust formula known to man. When you pull it from the box and it looks better than your bathroom mirror, you'll know you chose the right kit.

384 Chrome Elbow

When you've been chrome plating pipes for over 40 years, you start to get really good at it. Even if it's a double bend elbow. Although we all probably wish the 384 used a Pickett style elbow, it doesn't, but our Dynaflex kit will fit directly up to your OEM setup and won't require any "special" mounting accessories.

Sliding BJ Clamp

The OEM clamps are weak. Pins shake off and clamps fail. We let engineering loose and, well, they did what they do best. They improved the design. This clamp mounts directly to the OEM bracket using supplied adaptor plates and boasts a stronger connection and cotter pin assembly. A new swivel bushing and more durable support bushings come with the clamp assembly. This is one of the most tech clamps to ever leave our doors.

Chrome Mounting Hardware

If the elbow didn't catch your eyes first, chances are the famous Dynaflex "DP" caught your attention. A laser cut DP makes it easy to know you're getting the original handcrafted chrome exhaust system - Made in the USA by Dynaflex. Our bracket connects directly to your step and every necessary piece comes with your set up. This bracket doesn't need to hide behind anything. This bracket is from Dynaflex, and it's pretty hard to keep us from standing out of the crowd.

2X Series Spool

The innovation keeps coming with the next level of spools from Dynaflex. Our 2X Series spools feature two of our classic taper loc's, and ensures all the junk coming out that tier 4 exhaust system stays inside your chrome pipes. The new spool comes with every 384 kit, and when combined with our chrome clamps, you get a classic feel with a modern twist.
